

NEW “375 Super Life™ Polymer” - Super Dome™ Premier Packing

The stuffing box is perhaps the most important piece to your artificial lift surface hookup. From a standpoint, it is your seal. The most important component used to seal the stuffing box is the packing inside. WSI continually tests new and better materials to meet the demands for the ever-changing well conditions. By working with rubber manufacturers and field-testing new designs, WSI strives to make certain that our packing stands up to stringent durability and performance standards.

375 Super Life™ Polymer – Super Dome™ Packing

- Excellent in high water cut wells
- Excellent abrasion resistance
- Excellent chemical resistance
- Excellent resistance to explosive decompression in CO2

Super Dome™ Packing

- Superior performance to standard “economy” cone packing
- Largest insert ring increasing erodible wear volume (EWV)
- Low coefficient of friction:
 - Reduces heat build up
 - Reduces polished rod drag
- Temperature rating of 200F to -20F
- Order your WSI stuffing box with **Super Dome™** installed at the factory
